ABOUT ME

Passionate and dedicated **DevOps Engineer** with a strong drive to excel in fast-paced and challenging environments. Known for a hunger to continuously learn and adapt to emerging technologies, I thrive on solving complex problems and implementing efficient solutions. With a focus on innovation and productivity, I aim to leverage my skills to streamline processes, enhance system reliability, and contribute to the overall profitability and growth of the organization.

WORK EXPERIENCE

June 2025 - August 2025

Jaipur, Rajasthan

DevOps Engineer

LinuxWorld Informatics Pvt Ltd

- Gained hands-on experience working on multiple Linux distributions to simulate real industrial environments and professional workflows.
- Towards the end of my training, I developed the my own startup.
- Worked extensively on multiple Linux distributions to simulate real industrial environments and understand professional workflows.
- Maintained production-like servers, deployed applications, and resolved issues under real-time traffic conditions, improving system uptime and reliability.
- Automation Project - [Docker, Kubernetes, AWS, Terraform, Ansible, Jenkins & messaging Project on Streamlit](#), this integrate all task on one web page to operate easily.

CERTIFICATES

- | | |
|--|---|
| ★ AWS Cloud Quest: Generative AI Practitioner - Training Badge |] Issued by Amazon Web Services Training and Certification - Oct 2025 |
| ★ AWS Cloud Quest: Cloud Practitioner - Training Badge | |
| ★ Blockchain: Understanding Its Uses and Implications (LFS170) |] Issued by Linux Foundation Training - Nov 2025 & May 2025 |
| ★ Kubernetes:入門 LFS158JP | |
| ★ JASBAA 4.0 - Startup Show Casting (TRAVOZOM) |] Issued by LinuxWorld Informatics Pvt Ltd - Aug 2025 & July 2025 |
| ★ AWS Cloud With Artificial Intelligence Workshop | |
| ★ Linux Redhat Certified System Administrator (RHCSA - EX200) |] Issued by Udemy - Nov 2024 & June 2025 |
| ★ Fedora From Scratch | |

EDUCATION

B.Tech in Computer Science

August 2022 – July 2026 | Bareilly

Dr. A.P.J. Abdul Kalam Technical University

Specialized in software engineering and database management

Learned about the Operating System behavior and Algorithms with Mathematics

SKILLS & TOOLS

Programming Languages: JavaScript, Python, Bash

Databases: MySQL, MongoDB

Frameworks & Libraries: Flask, AI Agents, Numpy, Boto3

Cloud Platforms: AWS, Google Cloud

Operating System: Fedora, Arch, Red Hat Enterprise Linux, Ubuntu

CI/CD & Infrastructure: Git, GitHub Actions, Release Management, Monitoring & Logging

DevOps & Automation Tools: Docker, Kubernetes, Jenkins, Ansible, Terraform, Prometheus, Grafana, N8N, Make

PROJECTS

1. Bitcoin Lottery Miner Dashboard

Concept:

Containerized solo Bitcoin mining monitor simulating the “lottery odds” of finding a block.

Tech Stack: Docker, Node.js, Express, React.js, Socket.IO, REST APIs, cpuminer-opt

Highlights:

- Real-time dashboard for hashrate, pool stats, and GPU performance
- Multi-instance orchestration using Docker containers
- Responsive UI with dark analytics theme

2. DevOps & AI Control Center with Cloud Integration

Concept:

Centralized automation hub integrating DevOps workflows, AI-driven tasks, and cloud operations into a single control panel.

Tech Stack: Python, Node.js, Docker, Jenkins, Kubernetes, Terraform, Ansible, Generative AI, MongoDB

Highlights:

- Live terminal execution from the dashboard
- Multi-domain automation (Python, JS, Docker, Cloud APIs)
- AI-assisted task execution (email, WhatsApp, SMS automation)

3. Workflow Automation with n8n + AI

Concept:

End-to-end automated news and DevOps feed aggregator powered by AI summarization.

Tech Stack: n8n, Google Gemini API, Discord API, Telegram Bot, RSS Feeds

Highlights:

- Automated 45-minute scheduling system
- AI summarization of RSS articles (Docker, RedHat, Kubernetes)
- Instant updates to Discord via chatbots

4. Full-Stack Travel Website (Dockerized Architecture)

Concept:

A full-stack travel booking web app with microservices deployed via Docker Compose.

Tech Stack: React.js, Node.js, Express, MongoDB, Docker, Docker Compose

Highlights:

- Glass-morphism UI and responsive design
- Secure authentication and CRUD booking flow
- Dockerized frontend-backend integration

5. Kubernetes Auto-Scaling Web Cluster

Concept:

Self-healing web cluster demonstrating horizontal scaling and resilience under load.

Tech Stack: Minikube, Kubernetes, Docker, Apache HTTPD

Highlights:

- Horizontal Pod Autoscaler (HPA) configured for CPU-based scaling
- 10+ replica pods with dynamic load management
- NodePort service exposure with live verification

6. Multiverse OS Environment

Concept:

Multi-OS virtualization setup running RHEL 9, PureOS, and macOS Big Sur simultaneously on a Linux host.

Tech Stack: QEMU/KVM, Libvirt, Pop!_OS

Highlights:

- Virtualized cross-environment architecture
- Unified multi-OS workflow without Windows dependency
- Streamlined performance testing across distributions

7. CI/CD Pipeline Implementation

Concept:

Automated continuous integration and deployment pipeline for Python applications.

Tech Stack: Jenkins, GitHub, Docker, Pytest

Highlights:

- Jenkins job auto-triggered on GitHub commits
- Docker image build + unit testing automation
- Full DevOps loop from source to deployment
- Real-world simulation of production CI/CD pipelines

8. Wireless Canon Control System

Concept:

A PS3 controller-operated mini-cannon utilizing CNC motor mechanics for precision targeting.

Tech Stack: ESP32, CNC Motors, PS3 Wireless Interface, C++

Highlights:

- Real-time motion control over wireless protocol
- X-Y axis mapping with joystick input
- Low-latency servo synchronization

9. CNC Machine Writer

Concept:

Automated CNC-based pen plotter converting G-code into physical drawings.

Tech Stack: ESP32, CNC Shield, GRBL Firmware, G-code Parser

Highlights:

- Three-axis control for pen plotting
- G-code interpretation and rendering precision
- Offline execution with on-device logic

10. Offline AI Model Hub

Concept:

Local AI ecosystem integrating multiple LLMs and vision models on local hardware — fully air-gapped.

Tech Stack: Ollama, Open WebUI, Hugging Face, DeepSeek, Gemma, LLaMA 3.1, GPT-OSSQwen3-VL

Highlights:

- End-to-end offline AI inference and image generation
- Multi-model orchestration via Open WebUI
- Local compute optimization with hardware acceleration
- Complete internet-independent generative setup
